#### E. Assign Roles

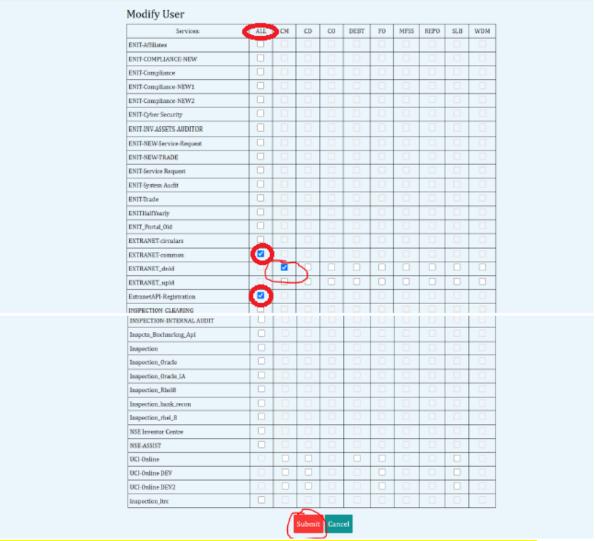

- Assign Roles Through this option , the admin user can provide the access to various modules available on member portal.
- In Assigned Roles >> Click on Assign Role

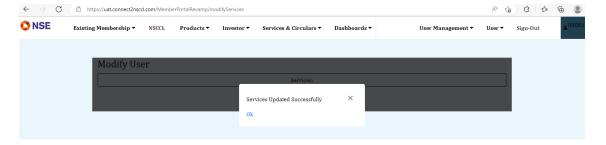

- On clicking Assign Roles the below screen would be displayed wherein all the segments will be represented column wise and the services will be mentioned row wise.
- There are two types of services which the admin user can give access:

#### Common Service Access Segment Specific Service Access In This type of service, the admin can In This type of service, the admin has to only provide the access to ALL segments provide the access to Specific segments to by to the sub users under him. the sub users under him. For eg: In case of Extranet common For ea: in the below screenshot the member service, the access would be given only has provided access to the sub-user for only for all segments i.e. in the below CM segment in case of Extranet\_dnld service. screenshot segment wise access is not allowed for extranet common service, thus member has the option to select 'All' and provide access for all segments.

- Once the segments are selected for which access is to be given user then has to click on the Submit button to update the same in the system.
- Click on Submit button
- After successfully assigning service to sub user "Services Updated Successfully" will be displayed.
